Job No.	19827739	Job For	American Asset Corporation
Date	10/18/2020		Brier Creek Commons, LLC
Type	Cleaning		Brier Creek Parkway
PO No.			Raleigh, NC 27617

## Job Description

This quote is for the labor and materials to chemically remove the calcium and lime from the wall of the Azitra patio. We will also remove any organic growth after the calcium and lime has been removed. We will access water to complete this work from the exterior commercial spigots throughout this project.

## Services

- Remove heavy calcium deposits from back wall of Azitra patio with calcite presoak and NMD80. Agitate with wire brush and reapply chemicals as needed.
- Treat wall and 40 tip to remove organic growth after calcium is removed.

Finished calcium removal..

Removed about 90percent. Applied several applications of chemicals needed. Scrubbed and scrapped of calcium.. Also doubled back to hit some areas from previous night to attempt to remove remaining. Feel much better on how job turned out tonight..Everything cleaned up well..

No deficiencies

Used 3 gallons of removal

2 gallons MD80

This section of wall has really thick calcium.. Used scrapper and brush to at least get some of it knocked down smooth.. We did remove some calcium but still no real luck removing all.. sand blasting would be ideal for this job..

Used 4 gallons of removal

3 gallons MD80

Calcium buildup is pretty bad.

Was able to complete a section of wall.. Again applying several applications of remover and MD80. Used a scrapper to scrape the really thick areas along with purchased wired brushes. Remove about 85 percent of calcium.. Some places of brick chipped in the process of 40 tipping.(see deficiency).Will return tonight to complete another section. Everything cleaned up pretty well..

No deficiencies
